In response to applicant's pre-amendment dated Sep. 18, 2003. the following action is taken:

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 6 and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by the admitted prior art (cited on page 3 lines 14-21).

Claim 1 merely read on using the output current from a photo detection elements to drive a conductor. The admitted prior art shows the use of an optical disk reading apparatus using photo detection elements to output a current. The current is then fed into a cable (conductor) meeting the claimed invention.

Claims 7, 8 and 10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

None of the cited prior art shows the use of the claimed elements such as low impedance load, summer and transconductance.

Claims 11-20 are allowed.

None of the cited prior art shows the use of an array of photodiodes, circuitry for driving the current across a conductor of flexible cable and low impedance load.

Art Unit: 2655

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. 5905750.
